

Bachman is Value-Added.

Today's market demands more and we have responded with more. At Bachman, value-added is not an after-thought. We have dedicated our resources to providing welding, in-die welding, tapping, in-die tapping, real-time die adjustments, assembly and finishing. And, because of our wholly owned subsidiary, Plastic Molding Company, we can mold and integrate plastic with any metal part.

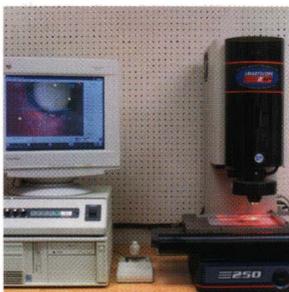

Metal Stamping

Two separate parts are stamped with the end result in mind.

Smart Scope

Accuracy is measured to ensure exact tolerances.

Tapping

Parts are conveyed automatically to one of several tapping stations.

Welding

Two separate parts are welded together to complete the assembled part.
